Economic and
Social Affairs

EKAP – End-to-End Operational & Governance System Map

Dr. Abdulla Al Hamed, Digital Transformation Advisor
April 2026

Executive Summary

This document presents the proposed end-to-end operational and governance model for EKAP, the future unified digital government intelligence platform. It translates the approved business and technical direction into a structured model covering roles, processes, validation, index generation, publication, monitoring, conceptual data relationships, logical architecture, and non-functional requirements. It is intended to support discussion and refinement of Deliverable 3, Technical Design Package, and Deliverable 4, Visual Mock-up of the Platform. The document does not fix the final implementation stack or procurement choice, which remain subject to UN OICT and UN DESA review.

AI Integration for EKAP

EKAP adopts a governed, support-oriented AI model that enhances data quality and integrity workflow efficiency, and analytical readiness across the platform lifecycle, while preserving human authority for all consequential actions. Approval, discrepancy resolution, index sign-off, and publication authorization remain reserved for UN Administrators.

01 Access, Entry and Survey Preparation
Registration quality checks, role-triage, guided MSQ and LGQ completion, evidence prompting, and responsible prepopulation of prior-cycle responses.

03 Administration & Methodology
Flagging ambiguous questions, recurring errors, evidence gaps, and potential impacts of methodological adjustments across survey cycles.

02 Validation & Intelligence
Explainable consistency checks, cross-source comparison, anomaly detection, and discrepancy prioritization linked to source evidence.

04 Publication & Dissemination
Post-approval drafting of summaries, country narratives, metadata, and multilingual content from approved, locked datasets.

How to Read This Document

This document is organized in five linked sections. Each section adds a different level of detail to the EKAP operating model.

01	Operating Model and Governance Defines the EKAP operating model, role architecture, methodology control, data integration logic, and the end-to-end system map.	Pages 4 – 9 →
02	Detailed Workflows Expands key operational flows — AI-assisted OSQ execution, validation, discrepancy resolution, index approval, publication, and methodology version control.	Pages 10 – 16 →
03	Conceptual Design Views Introduces the conceptual data model and logical architecture views showing how core entities, services, boundaries, and integrations fit together.	Pages 17 – 22 →
04	Non-Functional Requirements Highlights the security, governance, auditability, performance, accessibility, interoperability, and monitoring expectations shaping the platform.	Pages 23 – 25 →
05	Wireframe Reference Illustrates representative user journeys and interface views aligned to process stages, roles, and governance controls.	Page 26 onward →

TERMINOLOGY

LGQ

Local Government Questionnaire

AIQ

AI—assisted Online Service Questionnaire

Government Actor

A formal named role for government self—reporting

United Nations

Department of
Economic and
Social Affairs

Operating Model

EKAP operates through the interaction of three dimensions, bound by governance, data integrity, and auditability.

01

Process

Six end-to-end stages

- 01 Access & Entry
- 02 Survey Execution
- 03 Validation & Intelligence
- 04 Index Calculation
- 05 Publication & Dissemination
- 06 Monitoring & Feedback

02

Roles

Seven governed role bands

- A External Stakeholders
- B Assessors
- C Agentic AI (AIQ)
- D EKAP Core System
- E UN Administrators
- F External Data Providers
- G External Platforms

03

Technology

Standards-aligned platform
Identity & Access Management
Survey Intake Engine
Validation & Rules Engine
Index Calculation Service
Evidence & Document Store
Integration APIs
Publication & EGovKB
Audit & Monitoring

Role Architecture

EKAP defines 7 role bands. Government Actor is established as an explicit named role with its own governed workspace.

BAND	ROLE	KEY RESPONSIBILITIES
A	External Stakeholders Government / Public / Civil Society	Register and authenticate, submit MSQ self—reports, submit LGQ city data, view published results
B	Assessors MS / LG / OSQ	Complete OSQ evaluations, upload evidence and justifications, respond to discrepancies
C	Agentic AI (AIQ) Automated AI layer, support only.	Scan government websites, run consistency checks, performs cross—source comparison and flags anomalies
D	EKAP Core System Platform engine	Survey intake, rule—based validation, index computation, publication management
E	UN Administrators Governance and oversight (DPIDG / UN DESA)	Approve user roles, resolve discrepancies, approve index results, authorize publication
F	External Data Providers ITU / UNESCO / World Bank / UNDP	TII via ITU API, HCI via UNESCO API, WB and UNDP indicators, system—to—system integration only
G	External Platforms EGovKB / public APIs / downloads	Receive approved results, expose REST endpoints, CSV and Excel downloads, country and city pages

Administration and Methodology Control

EKAP supports the controlled administration of survey logic, questions, indicators, and methodology across cycles, ensuring transparency, traceability, and repeatability of every assessment.

01 Survey Cycle Configuration

Create, configure and activate cycles. Set submission deadlines and manage cycle transitions.

02 Indicator and Index Mapping

Map questions to composite sub—indicators; manage weighting and alignment with EGD and LOS.

03 Question Bank Management

Maintain the centralised repository across MSQ, OSQ and LGQ with activation and versioning.

04 Methodological Version Control

Track changes to calculation logic, scoring rules, and normalisation parameters per edition.

05 History of a Question

Follow any question across cycles: wording, type, indicator links, and repopulation decisions.

06 Toolkit Alignment and Configuration

Align platform behaviour with approved UN toolkits, languages, and regional adaptations.

07 Repopulation Options and Rules

Define rules for pre—filling responses from prior cycles with confidence thresholds.

08 Audit Trail

Record all administrative changes, approvals, and logic modifications as an immutable log.

Data and Integration Layer

EKAP combines survey responses, evidence, approved external datasets, and index logic in one governed platform. The integration model remains standards—aligned and architecture—neutral pending UN OICT review.

01 01 Trusted External Data Ingestion ITU telecom data UNESCO education World Bank UNDP HDI Other approved sources	02 02 Validation and Provenance Per—source rules Provenance tracking Cycle snapshots Versioned datasets Anomaly detection	03 03 Survey Data Integration MSQ national OSQ assessor LGQ city—level Evidence attachments AI—assisted intake	04 04 Index Generation EGDI computation LOSI computation Sub—index calculation Weighting & normalization Multi—stage approval	05 05 Publication Outputs EGovKB Dashboards REST APIs CSV / Excel Country & city profiles
---	--	---	--	--

Key User Journeys

Four primary journeys through EKAP, each mapped to process stages and role bands in the Master System Map.

Government Actor Role A	Assessor Role B	UN Administrator Role E	Publication Role D + E + G
01 Register / Login 1A1	01 Account Provisioned 1B1	01 Approve User Roles 1E1	01 Prepare Dataset 5D1
02 Complete & Submit MSQ 2A1	02 Role Assigned 1B2	02 Review Validation Flags 3E1	02 Generate Outputs 5D2
03 Submit LGQ City Data 2A2	03 Complete OSQ Evaluation 2B1	03 Resolve Discrepancies 3ED	03 Review Outputs 5E1
	04 Upload Evidence 2B2	04 Review Index Results 4E1	04 Approve Publication 5ED
		05 Approve Index 4ED	05 Deploy to EGovKB 5G1
		06 Authorize Publication 5ED	06 Activate APIs 5G2

End-to-End System Map

PROCESS

- 01
- 02
- 03
- 04
- 05
- 06

ROLES						
A	B	C	D	E	F	G
External Stakeholders Gov / Public / Civil Society	Assessors MS / LG / OSQ	Agentic (AI) Automated AI Layer	EKAP Core System Platform & Engine	UN Administrators Governance & Oversight	External Data Providers ITU / UNESCO	External Platforms EGovKB / APIs
01 Access & Entry PI: registrations, failed logins, inactive users	User Registration (Public / External) Account Creation via Email / Social Login	Assessor Account Provisioning Role Assignment (MS / LG / OSQ)	Identity & Access Management Role-Based Access Control (RBAC)	Approve / Manage User Roles Deactivate / Audit Accounts		
02 Survey Execution PI: submissions received, pending, overdue, avg completion time	MSQ – Gov Self-Reporting LGQ – Local Gov Submission	OSQ – Assessor Evaluation Evidence & Justification Submitted	AIQ – Automated Survey Execution Survey Intake & Structuring			
03 Validation & Intelligence PI: discrepancies flagged, AI risk alerts, review duration		AI Consistency Checks Cross-Source Comparison Anomaly & Risk Flags	Rule-Based Validation Engine Discrepancy Consolidation	Review Flags & Exceptions Approve / Reject Submissions Review Flags & Exceptions Review Flags & Exceptions		
04 Index Calculation PI: data readiness, recalculation count, approval latency		AI Consistency Scoring	OSI Score Computation TII Integration (ITU) HCI Integration (UNESCO) Index Aggregation Engine Approved Composite Index Dataset	Review Draft Index Results Approve Index Results Approved > Next Stage Rejected > Revalidation	TII Dataset (ITU API) HCI Dataset (UNESCO API)	
05 Publication & Dissemination PI: publication status, access volume, download counts			Prepare Publication Dataset Generate Standard Publication Outputs	Review Publication Outputs Approve for Publication Approved Rejected – Revision Required Review Publication Outputs		Publish Results to EGovKB Expose Results via APIs / Downloads
06 Monitoring & Feedback			Usage & Access Monitoring System Performance Metrics	Review System Reports Trigger Policy / Process Updates Operational Performance Dashboard Stage-Level Performance Indicators (PI)		

Legend

Role Bands (rows)

- A External Stakeholders
Government Actor is a formal sub-role
- B Assessors
MS / LG / OSQ
- C Agentic AI
AIQ automated support layer
- D EKAP Core System
Platform engine and processing
- E UN Administrators
Governance and oversight (DPIDG)
- F External Data Providers
ITU, UNESCO, World Bank, UNDP
- G External Platforms
EGovKB, public APIs, downloads

Process Stages (columns)

- 01 Access and Entry
- 02 Survey Execution
- 03 Validation and Intelligence
- 04 Index Calculation
- 05 Publication and Dissemination
- 06 Monitoring and Feedback

Screen Codes

Each cell is labelled with a code combining Process, Role, and Sequence.

Example: 2A1
2 = Process 02 (Survey Execution)
A = Role A (External Stakeholders)
1 = Screen 1

Note: If the last character is "D", it represents a Decision step rather than a screen.

How to Read

Read left to right across process stages.
Read top to bottom across role bands.
Each cell shows the screen(s) available for that role at that process stage

SECTIONS

Detailed Workflows

Six operational flows expanded from the Master System Map, with clearer ownership, decision points, methodology controls and audit traces.

WHAT'S INSIDE

01	AI-Assisted OSQ / AIQ Automation	»
02	AI Confidence Scoring & Review Logic	»
03	Validation & Discrepancy Resolution	»
04	Index Calculation & Approval	»
05	Publication & Dissemination	»
06	Methodology Change & Version Control	»

AI-Assisted OSQ / AIQ Automation

How the Agentic AI layer supports Assessors by extracting, mapping and routing OSQ evidence while keeping methodology control and human review explicit.

PHASE 01

AI Extraction

Agentic AI layer (AIQ)

01

Approved source catalogue

Validated service URLs and permitted domains.

02

Public service scan

AI crawls pages and captures provenance.

03

Evidence extraction

Structured findings and screenshots captured.

04

Map to OSQ / Toolkit logic

Findings mapped to questions and indicators.

05

Assign confidence

Each finding receives confidence and risk metadata.

PHASE 02

Rule Validation

EKAP Core System

01

Methodology checks

Weights, thresholds and mappings applied automatically.

02

Cross-source comparison

Findings reconciled with prior-cycle and trusted sources.

03

Flags & case creation

Validation Flags grouped into Discrepancy Cases.

PHASE 03

Human Review

Assessor · UN Administrator

01

Assessor review

Evidence confirmed, revised or supplemented.

02

UN Administrator escalation

High-risk or conflicting cases routed to governance review.

03

Approve · Revise · Reject

Only validated outcomes proceed to downstream scoring.

AUDIT TRAIL

Every scan, AI Finding, Validation Flag, decision and override is logged with actor, timestamp, source and Methodology Version.

United Nations

Department of
Economic and
Social Affairs

AI Confidence Scoring & Review Logic

How AI-extracted evidence is routed based on confidence levels and risk, ensuring human oversight where it matters most.

HIGH

≥ 85%

Accelerated assessor confirmation

Visible confidence speeds review, but human confirmation remains required.

MEDIUM

60 – 84%

Assessor review required

Assessor validates evidence and adjusts mapping where needed.

LOW

< 60%

Mandatory manual review

Assessor re-checks the source, adds evidence or re-scores.

CONFLICT

any level

Escalation to UN Administrator

Conflicting evidence or policy-sensitive anomalies trigger governance review.

ROUTING PRINCIPLES

- Confidence drives default routing, not the final decision.
- Low-confidence and high-risk cases require human review before scoring.
- Assessors can override AI classification with written justification.
- Thresholds are configurable by Methodology Version and indicator family.
- UN Administrator intervenes on escalations, disputes and policy-sensitive cases.
- AI never approves publication or bypasses human approval gates.

Validation & Discrepancy Resolution

How submitted evidence is validated, how discrepancies are grouped into cases, and how they are resolved by Assessors and UN Administrators.

PHASE 01

Intake

EKAP Core System

01

Submission received

MSQ / LGQ / OSQ submission captured with actor and cycle scope.

02

Validation scheduled

Queued for rule, source and provenance checks.

PHASE 02

Validation

EKAP Core · Agentic AI

01

Rule-based checks

Methodology rules and thresholds applied automatically.

02

Cross-source comparison

Findings reconciled with external data and prior evidence.

03

Case consolidation

Validation Flags grouped into Discrepancy Cases with severity.

PHASE 03

Resolution

Assessor · UN Administrator

01

Case review

Assessor reviews each case and updates evidence or rationale.

02

Governance escalation

Unresolved or contested cases raised to UN Administrator.

03

Approve · Revise · Reject

Resolved outcomes feed Index Calculation or resubmission.

AUDIT TRAIL

Each validation run, Discrepancy Case, reassignment and resolution is captured with actor, timestamp and provenance.

United Nations

Department of
Economic and
Social Affairs

Index Calculation & Approval

How approved evidence becomes OSI / LOSI, TII and HCI sub-indices and composite results, with explicit methodology and approval control.

PHASE 01

Prepare

EKAP Core System

01

Data readiness check

Confirms validated submissions and required source data.

02

Snapshot ingestion

Approved external dataset snapshots are attached to the run.

03

Methodology Version

Active mappings, weights, thresholds and formulas applied.

PHASE 02

Compute

Index Calculation Service

01

OSI / LOSI scoring

Assessment-derived sub-indices computed from approved responses.

02

TII + HCI integration

External sub-index inputs merged from approved snapshots.

03

Index aggregation

EGDI and related results assembled with traceable formula use.

PHASE 03

Approve

UN Administrator

01

Draft review

UN Administrator reviews draft results, deltas and evidence.

02

Approval gate

Explicit approval or return-for-rework decision recorded.

03

Versioned dataset

Approved Index Result set locked for publication packaging.

AUDIT TRAIL

No Index Result moves downstream until an explicit approval record captures actor, timestamp, Methodology Version and source snapshots.

Department of
Economic and
Social Affairs

Publication & Dissemination

How approved results become public datasets, APIs and EGovKB entries — with authorization, versioning and access controls.

PHASE 01

Package

EKAP Core System

01

Publication Package

Approved datasets, narratives and metadata assembled.

02

Standard outputs

CSV, Excel, API and country / city output bundles are generated.

03

Methodology note

Methodology Version, provenance and caveats attached.

PHASE 02

Authorize

UN Administrator

01

Package review

UN Administrator reviews final outputs and publication controls.

02

Authorization record

Approval captured with rationale and release status.

03

Release scheduled

Embargo timing, rollback path and target channels confirmed.

PHASE 03

Disseminate

Publication Service

01

Deploy to EGovKB

Country pages, city pages and Toolkit-linked views updated.

02

Activate public APIs

Versioned endpoints exposed for approved outputs only.

03

Exports available

Bulk downloads published with release metadata.

AUDIT TRAIL

Every Publication Package is versioned, traceable to approval and methodology records, and reversible through a controlled rollback workflow.

United Nations

Department of
Economic and
Social Affairs

Methodology Change & Version Control

How methodology updates to indicators, mappings, weights, thresholds and Toolkit alignment are governed without disturbing live cycles.

PHASE 01

Propose

EKAP Core · UN Administrator

01

Change package raised

Request includes indicator, mapping, weight or threshold rationale.

02

Impact assessed

Cycle, Toolkit and historical-result impacts are reviewed.

PHASE 02

Review & Approve

UN Administrator (governance board)

01

Governance review

Change considered against prior cycles and publication commitments.

02

Approve / Reject

Decision, approver and rationale recorded.

PHASE 03

Version & Apply

EKAP Core System

01

Version published

New Methodology Version and Toolkit configuration issued.

02

Applied to cycle

Activated only for eligible future survey cycles.

03

Prior results

Historical results impact remain linked to their original version.

AUDIT TRAIL

Active Methodology Versions remain immutable within a running cycle. Every Index Result remains linked to the version and Toolkit configuration that produced it.

SECTIONS

Conceptual Data Model

The core EKAP domain objects and their conceptual relationships. Not a physical schema – it is intended to show workflow, methodology and governance linkage.

WHAT'S INSIDE

- | | | |
|----|-------------------------------------|---|
| 01 | Conceptual Entity Relationship View | 2 |
| 02 | Entity Notes & Definitions | 2 |

Conceptual Entity Relationship View

Core entities and relationships across survey setup, validation, scoring and publication.

AUDIT LOG

Records every material action including who, when and why

Conceptual view only. Detailed attributes and physical data design will be defined in the Technical Design Package.

Entity Definitions

Purpose of each core entity in the EKAP domain model.

ENTITY	ENTITY	ENTITY
User Any authenticated actor — government, assessor or UN admin.	Role Named responsibility band (A–G) controlling access rights.	Assessor Profile Credentials, languages, domains and training status.
Assessor Assignment Profile assigned to questionnaire, country or scope.	Country Top-level scope for a survey cycle.	Local Gov / City Sub-country unit reported by LGQ submissions.
Survey Cycle Time-bound run of data collection and scoring.	Methodology Version Immutable snapshot of rules, weights and thresholds.	Indicator Mapping Link between a Question and an OSI / LOSI indicator.
Questionnaire MSQ, LGQ, OSQ or AIQ instrument for a cycle.	Question Individual item bound to an Indicator Mapping.	Submission One party's response to a questionnaire for a cycle.
Response Answer to a single question within a submission.	Evidence File, URL or attachment supporting a response.	AI Finding AI-extracted evidence with source URL and confidence.
Validation Flag Rule-based anomaly raised against a response or finding.	Discrepancy Case Grouped flags routed for Assessor / UN Admin resolution.	External Snapshot Point-in-time capture of ITU / UNESCO / WB / UNDP data.
Index Result Computed score linked to a Methodology Version.	Publication Package Approved release bundle pushed to EGovKB and APIs.	Audit Log Immutable record of every material action in EKAP.

SECTIONS

Conceptual Architecture

Technology-neutral view of how EKAP is organized into layers, services and governed integrations. Final deployment choices remain out of scope.

WHAT'S INSIDE

01	Logical Architecture	2
02	Architecture Boundaries & Integration	2

Logical Architecture

Six horizontal layers with a vertical governance spine cutting across all of them.

NOTE Governance & Control cuts across every layer. Layer contracts are logical; physical packaging and vendor choices are later decisions.

Architecture Boundaries & Integration

How EKAP core services, connected support services and external integrations interact.

Illustrative logical view only. Final implementation stack and deployment architecture remain subject to UN OICT and UN DESA review.

SECTIONS

Non-Functional Requirements

Cross-cutting expectations the platform must meet to be trusted by governments, researchers and the UN governance framework.

WHAT'S INSIDE

- | | | |
|----|---|---|
| 01 | Security, Governance & Auditability | 2 |
| 02 | Performance, Accessibility & Interoperability | 2 |

Security, Governance & Auditability

Foundational expectations grouped around control, traceability and operational trust.

SECURITY & ACCESS CONTROL

Protected by Role and Scope

- RBAC and least-privilege across roles A–G
- Evidence access controlled by assignment and scope
- Separation of duties for validation, scoring, publication
- Encryption and data classification for sensitive content

AUDITABILITY & TRACEABILITY

Every Decision Leaves Evidence

- Approval records: actor, timestamp, rationale, status
- Methodology versions remain historically traceable
- Dataset provenance shows source, snapshot or override
- Validation and scoring runs are reproducible

AI GOVERNANCE & EXPLAINABILITY

Assistive, Never Autonomous

- AI cannot approve or publish final outputs
- Confidence scores visible and routed by policy
- Low-confidence and high-risk cases require human review
- Human overrides logged with justification

RESILIENCE & AVAILABILITY

Dependable Operations

- Backup and recovery for controlled data restoration
- Graceful degradation if external integrations fail
- Safe retries for long-running AI and calculation jobs
- Controlled rollback for methodology and publications

Performance, Accessibility & Interoperability

How EKAP stays responsive, inclusive and connected to the wider data ecosystem.

PERFORMANCE & SCALABILITY

Responsive at Global Scale

- Responsive interactions for all user roles
- Scales across countries, cities, cycles and user volumes
- Evidence-heavy workflows handled without blocking
- Concurrent review, scoring and publication windows supported

ACCESSIBILITY & MULTILINGUAL

Usable Across Audiences

- Public interfaces aligned with WCAG 2.1 AA as target
- Keyboard navigation and screen-reader support
- UI strings externalised for translation
- Support for UN working languages at minimum

INTEROPERABILITY

Connected to the Ecosystem

- Versioned APIs with documented contracts
- CSV / Excel exports for downstream analytics
- Trusted data exchange with ITU, UNESCO, WB, UNDP
- Aligned with open-data conventions where appropriate

MONITORING & OBSERVABILITY

Operational Visibility

- Workflow dashboards show health and bottlenecks
- Structured logging across services and integrations
- Traceable correlation across validation and scoring runs
- Alerting on error rates and SLA risks

API Endpoints

GET /api/v2/egdi/rankings

Returns full EGD rankings for all 193 countries. Supports pagination and filtering.

Staged — JSON | Auth: API Key

EGDI—2026—Full .csv

Complete dataset in CSV format. 193 rows, 12 columns.

Ready — Public Download | 24MB

GET /api/v2/egdi/country/{code}

Returns detailed EGD profile for a single country by ISO code.

Staged — JSON | Auth: API Key

EGDI—2026—Full .xlsx

Complete dataset in Excel format with formatting and charts.

Ready — Public Download | 31MB

These screens illustrate how approved EKAP outputs are prepared, reviewed, authorized, and published into the wider knowledge environment through reports, profiles, dashboards, APIs, and download services. Publication outputs support both national and local knowledge views, aligned with EGovKB structures and governed release processes.

Open Decisions for Discussion

The following points require confirmation from the UN EKAP project team before proceeding to prototype development.

- 01 Confirm the final primary role architecture, including Government Actor as a distinct governed role.
 - 02 Confirm terminology standardization across LGQ, AI—assisted functions, and role labels.
 - 03 Confirm whether the administration and methodology control layer is represented strongly enough in the system model.
 - 04 Confirm whether the local government and LOSI dimension is sufficiently visible across calculation and publication flows.
 - 05 Confirm that technology labels remain appropriately conceptual pending UN OICT direction.
 - 06 Confirm which journeys and screens should be prioritised for the next prototype wave.
-

THANK YOU.
